

Prompt Session 1: Scaffolding the Multi-Agent System

Developer: Write a LangChain orchestrated multi-agent system in Node.js that takes a ticker and runs 3 agents: Financial, News, and Risk.

Groq: I will use the `ChatGroq` model along with `PromptTemplate` and `RunnableSequence` to orchestrate this. Here is the structure...

```
const financialAgent = new PromptTemplate({
  template: "Analyze the following data: {data}",
  inputVariables: ["data"]
});
```
